

agileMantis

Getting Started:

Why Scrum with **agileMantis**

View the Demo

Installation

Performing the first Sprint

Version: 1.2.0

Date: 31.03.2014

Classification: gadiv-extern

Division: agileMantis

Filename: Kurzdokumentation.agileMantis.en

You
are organizing or developing software products.

are organizing or developing software products.

is the way you organize or want to organize your development-cycles.

is optimally your current bugtracking-system (or must be installed).

This is **MantisBT** ...

... and this is the extension by **agileMantis**

```
graph TD; subgraph MantisBT; P[Projects] --> T[Trackers]; end; subgraph agileMantis; PB[ProductBacklogs] --> US[UserStories]; US --> Tsk[Tasks]; US --> S[Sprints]; S --> Te[Team]; Te --> M[Members]; M --> C[Capacities]; C --> Tsk; end; P --> PB; T --> US;
```

The diagram illustrates the architectural difference between MantisBT and agileMantis. On the left, the MantisBT structure shows a vertical flow from **Projects** (blue box) to **Trackers** (red box). On the right, the agileMantis structure shows a more complex, interconnected flow: **ProductBacklogs** (blue box) leads to **UserStories** (red box), which then branches into **Tasks** (blue box) and **Sprints** (blue box). **Sprints** leads to **Team** (blue box), which leads to **Members** (blue box), which leads to **Capacities** (blue box), which finally leads back to **Tasks**. Additionally, horizontal arrows connect **Projects** to **ProductBacklogs** and **Trackers** to **UserStories**, indicating the extension of the existing MantisBT structure.

- In the following we guide you to

2 Daily work in agileMantis: visit the Demo project

You might wish to see, how the various artefacts of Scrum come along in agileMantis and how to navigate between them. You can explore this in the Demo-project. For simplicity, the data of this Demo contain a single Product Backlog only. Please open

<http://agilemantis.sourceforge.net/plugin.php?page=agileMantis/info.php>

2.1 Menu structure

Please log in as „developer“.

You now see the main menu:

The menu contains the traditional items of MantisBT, extended by **bold** items of agileMantis. In agileMantis, this is the *viewing*-section of the Menu:

... | [Summary](#) | **[Product Backlog](#)** | **[Sprint Backlog](#)** | [My Account](#) | ...

2.2 Display issues and User Stories

- To view any MantisBT-issue, click [View Issues](#), configure the filter and click Filter.
- To view User Stories of the Product Backlog, click [Product Backlog](#).

Product Backlog

Choose a Product Backlog

Create a Sprint

Name	Description	Team	Product Owner	Scrum Master	Current Sprint
Demo Product Backlog	This is a demo product backlog.	Demo Team	ProductOwner	ScrumMaster	Demo Sprint Running

User Stories

Save

☐ User Stories without Story Points only
 ☒ Completed User Stories too
 ☐ Closed User Stories too
 ☐ User Stories without Sprint only
 ☐ User Stories for current Project only
 ☒ Display Project / Target Version

Ranking Order	Business Value	Story Points	ID	Category	Target version	Summary	Sprint
3	3000	21	16	Prototyping	Demoversion 1.0.0	Create a basic GUI with a menu, an input field and a digit panel	Demo Sprint Running
5	300	3	3	Realisation	Demoversion 1.0.0	Create a menu with copy and paste functions	Demo Sprint Running
	1200	34	22	Prototyping	Demoversion 1.0.0	Create a panel with arithmetical operations	test Sprint
	300		20	Installation	Demoversion 1.0.0	Create a Windows setup file	

2.3 Daily work in running Sprints

To view User Stories of the currently running Sprint, click [Sprint Backlog](#).

- The headline displays the duration of the Sprint.

- The listing below shows the User Stories and for each the associated Tasks.

In other words, here we see the Sprint's Task Board.

User Stories & Tasks

☒ Display Project / Target Version

☐ Incomplete User Stories only

☐ Your own User Stories only

	ID	Summary	Developer	Planned (h)	Performed (h)	Enter performed work (h)	Rest (h)	SP	R	Target Version	Actions
	#2	Create an input field for arithmetic operations					3	4		Demoversion 1.0.0	<div>Add Task</div> <div>Split Story</div>
		Create Input Field	Entwickler	3.25	0.00	<div><div></div>Enter</div>	3.25				<div>Edit</div> <div>Adopt</div> <div>Resolve</div>
		QA Test Input Field	Developer	2.00	0.00	<div><div></div>Enter</div>	2.00				<div>Edit</div> <div>Adopt</div> <div>Resolve</div>
	#3	Create a menu with copy and paste functions					3	5		Demoversion 1.0.0	<div>Add Task</div> <div>Split Story</div>
		Create Menu	Entwickler	4.00	4.00	<div><div></div>Enter</div>	0.00				<div>Edit</div> <div>Adopt</div> <div>Resolve</div>

The daily work of the Developer Team consists just of these simple inputs:

- Details of a UserStory show up on clicking its [#ID](#).
- Success of each Task can be typed in via the performed work (0 is allowed), then pressing [Enter](#).
- The Task is finished by pressing [Resolve](#).

2.4 Creating Scrum artefacts

Please login as administrator.

You see immediately the extended main menu:

... | [Summary](#) | [Product Backlog](#) | [Sprint Backlog](#) | [agileMantis](#) | [My Account](#) | ...

A click on [agileMantis](#) opens the central Scrum-submenu for agileMantis administrators, This is the *creation*-section of agileMantis where Teams etc. are instantiated.

... [\[Manage Product Backlogs\]](#) [\[Manage Teams\]](#) [\[Manage Sprints\]](#) ...

If you like, just try yourself now. But this more elaborate work is easier to explore following part 4 of this manual. Just download agileMantis and then follow the instructions.

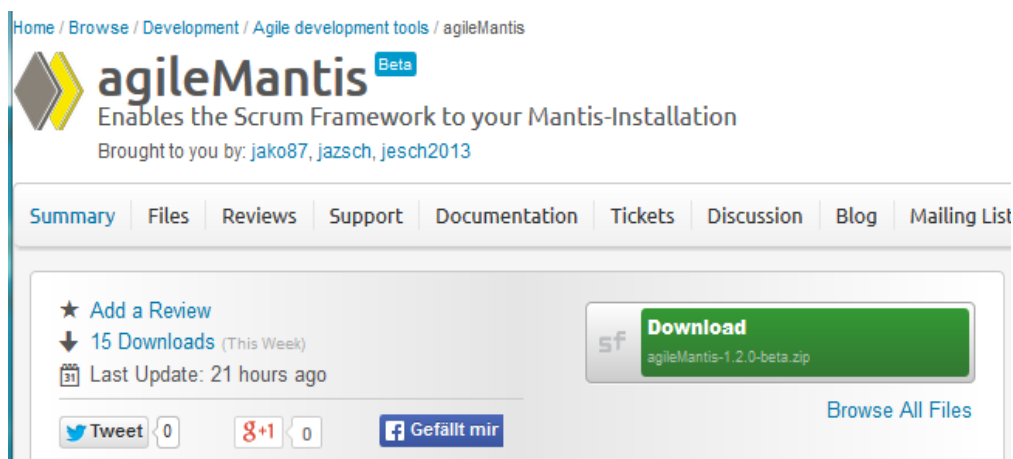

3 Installation

Installation has two steps:

- System requirements (Steps 1-2)
- Plugin installation (Steps 3-10)

Note: The system requirements of agileMantis are essentially covered by those of MantisBT. In the current version agileMantis can only be used in connection with a MySQL database. Other databases will be supported in a later version.

1. Optimally you are already user of MantisBT Version 1.2.5. or newer using a MySQL database.
 - If MantisBT is not installed, install or update it first from
<http://www.mantisbt.org/manual/admin.install.html>
 - If MySQL is not installed, we recommend to install from
<http://dev.mysql.com/downloads/mysql/5.5.html#downloads>
2. *Notes:* MantisBT recommends to use a MySQL database. Installing MantisBT is an advanced task that should be given to a system manager.
3. Download agileMantis from our Sourceforge project page
<http://sourceforge.net/projects/agilemantis/>.
By clicking the download button there you get the newest version.

Keep care to remember the destination directory of the download soon.

4. Unzip agileMantis files in the download-folder. The unzipped agileMantis folder appears.
5. Log into your MantisBT Installation as an administrator.
6. Click [Manage](#).

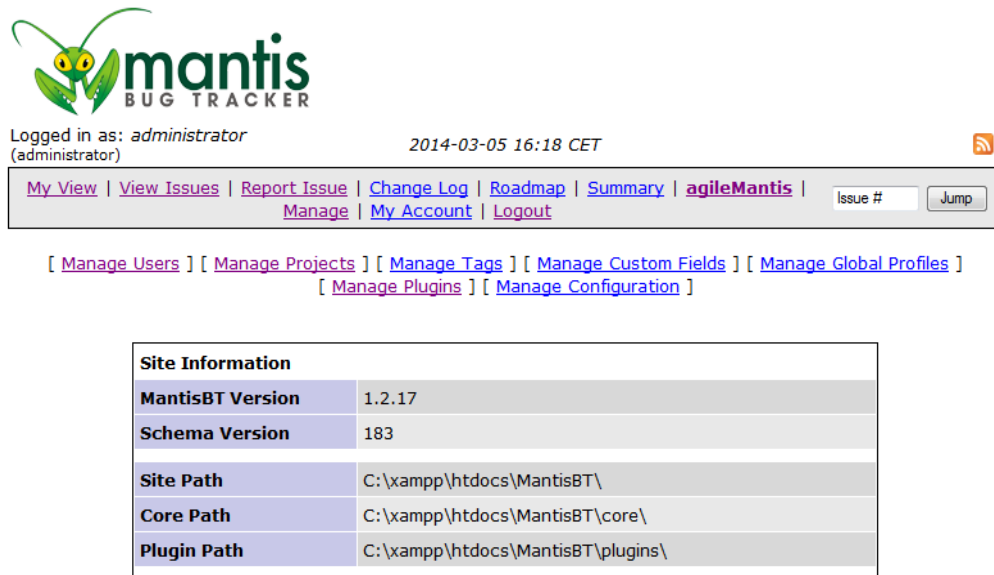

You see the Mantis Plugin Path, here „C:\xampp\htdocs\mantis\plugins\“.

Note! In the browser you see the URL of your Mantis-installation with the

MantisBT domain name/IP address heading the line (here „**coffeestation3**“).

That is, where the physical disc „**C:**“ of the „**Plugin Path**“ resides. This is *not necessarily* C:\ on your local computer.

7. Open your FTP File Transfer Tool

Site Information	
MantisBT Version	1.2.17
Schema Version	183
Site Path	C:\xampp\htdocs\MantisBT\
Core Path	C:\xampp\htdocs\MantisBT\core\
Plugin Path	C:\xampp\htdocs\MantisBT\plugins\

8. Copy the downloaded and unzipped agileMantis folder from your *local* path to the MantisBT plugin folder *as explained under (5.)*.
9. In MantisBT, click **Manage** → **[Manage Plugins]**.
If the agileMantis folder was copied to the correct destination in (7), you see the agileMantis line.
10. Click **[Install]** at right of the agileMantis line under „**Actions**“.

agileMantis is ready for use now.

4 Performing Scrum with agileMantis – an elementary Sprint

In the following you are guided to do all necessary and routinely steps to perform Scrum with agileMantis.

For this purpose, an initial creation step is required, followed by the alldays Sprint activities.

For convenience you find three simplifications

- There is *a single* Product Backlog only
- There is *a single* Team only
- Team and Tasks are not embedded into the capacity-management

Later you can set off from there to explore the numerous extensions to these basics.

During tutoring you can easily do these jobs alone.

Please don't shy back; The complete description text is on just 4 sheets of paper plus figures, half of it is just initial. There is much less work to be done than it might seem at first glance.

Note: this will not be an „in principle you can..“ but an explicite „please do now..“ tutorial. Be prepared to start acting now.

4.1 Creating initial artefacts

4.1.1 Overview

In a nutshell: Fig 4.1. displays the usual artefacts to be created for Scrum and how to assign them along the arrows.

Figure 4.1. Initial artefacts

A user is generated from an account just by assigning agileMantis rights to him. Users come along with different rights in different roles as listed in table 4.1.

Role	Creates and maintains	agileMantis rights
MantisBT Administrator	MantisBT-accounts, Projects	
agileMantis Administrator	agileMantis users, Product Backlogs Teams, Settings	agileMantis-administrator
Product Owner	Issues, User Stories	agileMantis-developer (for example)
Scrum Master	Sprints	agileMantis-developer (for example)
Developers	Tasks	agileMantis-developer
Stakeholder	[View only]	agileMantis-participant

Table 4.1. Roles

We will now create the above objects *depending on the initial state of your installation*.

How to proceed

- If you are working with Mantis already:
Skip the following paragraph and go to (4.1.3)
- If you have installed Mantis just ago for being used with agileMantis:
Directly continue with (4.1.2)

4.1.2 Create/Initialize project, accounts and users in a new Mantis installation

Login as the user „administrator“.

4.1.2.1 Create accounts and users in a single step

To create a new account and user in a single step

1. Press [agileMantis](#) → [\[Manage agileMantis Users\]](#) → **Create User**
2. Fill the fields and set the rights according to Table 4.1.
3. Press **Create User**

Create New Account	
Username	<input type="text" value="amadmin"/>
Real Name	<input type="text" value="Manuela Adminster"/>
E-mail	<input type="text" value="ma@domain.com"/>
Password	<input type="password" value="••••••"/>
Verify Password	<input type="password" value="••••••"/>
agileMantis Participant	<input type="checkbox"/>
agileMantis Developer	<input type="checkbox"/>
agileMantis Administrator	<input checked="" type="checkbox"/>
<input type="button" value="Create User"/> <input type="button" value="Back"/>	

Please create the set of users according to Table 4.1. now.

After each user creation, you see the users list again. Here is an example.

Manage agileMantis Users <input type="button" value="Create User"/>					
Username	Real Name	Email	agileMantis Participant	agileMantis Developer	agileMantis Administrator
administrator		root@localhost	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
amadmin	Manuela Adminster	ma@domain.com	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
dev1	Develin Realis	dr@domain.com	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
dev2	Tom Factors	tf@domain.com	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
dev3	Barbara Makers	bm@domain.com	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
hoster	Holger Steaker	hst@domain.com	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
powner	Lucinda Owners	lo@domain.com	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
smaster	Peter Scrumpers	ps@domain.com	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
<input type="button" value="Save"/>					

The creation of users from *existing* accounts is described in paragraph 4.1.3.

4.1.2.2 Create a project

1. Press [Manage](#) → [\[Manage Projects\]](#) → **Create New Project**
 - Type Name, Description etc. (e.g. test_Project)
 - In the field „Category“ type „none“ (just to make it non empty)
2. Press **Add Project**

4.1.2.3 Assign accounts/users to the project

1. In the [Manage](#) → [\[Manage Projects\]](#) section
2. Click on the [Project's Name](#)
3. In the „Add user to project“ pane, set the **Access Level** to „developer“.
4. In the „Add user to project“ pane, select or multiselect the users to be attached and press **Add User**. In the „Manage Accounts“ pane below, the attached users are listed and can be removed.

Hint: All users with administrator right are automatically attached to each project, but only listed on [Show Users with Global Access](#).

Add user to project

Username	Access Level	
dev1 dev3 hoster	developer	Add User

Copy Users From

Copy Users To

Manage Accounts

Username	E-mail	Access Level	Actions
dev2	tf@domain.com	developer	Remove
smaster	ps@domain.com	developer	Remove

Show Users with Global Access

Remove all

Initialization of project, accounts, users is complete! Please turn to (4.1.4.) now.

4.1.3 Create/Initialize project, accounts and users in an existing MantisBT installation

4.1.3.1 Check for existence of required project

If not existing already, please create a project for the Scrum process in your usual way (or visit (4.1.2.2)).

4.1.3.2 Check for existence and assignment of required accounts

If not existing already, please create the set of accounts according to Table 4.1. in

your usual way (or visit 4.1.2.1)).

Assign the accounts to the project in your usual way (or visit 4.1.2.3).

4.1.3.3 Create agileMantis users from existing accounts

To do this, it is necessary to have the rights of a MantisBT or an agileMantis administrator.

Users are created from accounts directly by assigning agileMantis rights to them

1. Press [agileMantis](#) → [\[Manage agileMantis Users\]](#)
 - Set the checkboxes of agileMantisRights for the concerned accounts
2. Press **Save**.

Please create the set of users according to Table 4.1. now.

4.1.4 Create Product Backlog and Team

Please login as Mantis- or agileMantis administrator

4.1.4.1 Create a Product Backlog and add a project

1. Press [agileMantis](#) → [\[Manage Product Backlogs\]](#) → **Add Product Backlog**
 - Type ***Name**, **Description** and ***Email address of team user** of your choice. (e.g. Backlog1 etc).
2. Press **Save**. The dialog expands downwards.
 - From the Projects-combobox select a project (e.g. test_project).
3. Press **Add Project**.
You can add and remove more projects. They appear in the list under „Projects“.

4.1.4.2 Create a Team and assign it to the Product Backlog

1. Press [agileMantis](#) → [\[Manage Teams\]](#) → **Add Team**
 - Type **Name** and a **Description** for the Team (e.g. Team1).
 - From the ***Product Backlog-combobox**: Select a Product Backlog (e.g. Backlog1)
2. Press **Save**. The dialog expands downwards. Now

Edit Team

*Name	Team1
Description	The first Team
*Product Backlog	Backlog1

* required

Save Back

- From the **Product Owner-combobox**: Select a Product Owner and press **Change**.
- From the **Scrum Master-combobox**: Select a Scrum Master and press **Change**.
- From the **Developer-combobox**: Select a developer and press **Add**.
- Select more developers and press **Add** for each

Product Owner

Lucinda Owners

Change

Scrum Master

Peter Scrumpers

Change

Developer

Name	Username	Email	Actions
Develin Realis	dev1	dr@domain.com	Remove
Barbara Makers	dev3	bm@domain.com	Remove

Please choose

Add

- You see the list of developers and can add or remove more.

Now you have a Team that is ready for scrumming. Each member is automatically assigned to her role in the Scrumteam for this Product Backlog.

Hint: Don't worry, if you have assigned already existing Mantis accounts as users to the Team. The user data in your original MantisBT will *not be affected*.

4.2 Product Owner's activity

Please login as Product Owner

Issues are used by MantisBT and agileMantis as preliminary ideas which, once sufficiently matured, are upgraded to User Stories.

Creation of User Stories is a permanent activity of the Product Owner. He periodically presents the stories to the Team in order to estimate Story Points for them.

4.2.1 Create Issues

1. Press **Report Issue**.
 - If requested, select the hosting project of the issue, e.g. test-project, and press **Select Project**.
 - Now fill the fields **Category**, **Summary**, **Description** as a minimum
2. Press **Submit Report**.

4.2.2 Create a User Story by assigning an issue to a Product Backlog

1. Press [View Issues](#)
2. Select a project (that was assigned to the Product Backlog) from the combo box at right on top of the menu. The associated issues are listed.
Hint: If only a single project exists, that needs not be selected and is the default.
3. Click the [ID](#) of the issue
4. From the **Product Backlog-combobox**: Select a Product Backlog. e.g. Backlog1.
5. Press **Save Information**

View Issue Details [Jump to Notes] [Send a reminder] [<<] [>>] [Issue History]					
ID	Project	Category	View Status	Date Submitted	Last Update
0000002	Project1	[All Projects] General	public	2014-03-05 13:51	2014-03-05 13
Reporter	powner				
Assigned To					
Priority	normal	Severity	minor	Reproducibility	have not tried
Status	new	Resolution	open		
Platform		OS		OS Version	
Business Value	<input type="text"/>				
Story Points	<input type="text"/>				
Product Backlog	Backlog1	Sprint	<input type="text" value="Choose Sprint"/>		
agileMantis-Actions	<input type="button" value="Save information"/> <input type="button" value="Edit Tasks"/>				
Summary	0000002: Issue 0000002				
Description	The second issue				

The issue now belongs to the Product Backlog as a User Story.

4.3 Setting Story Points

Please login as Developer or Scrum Master

From time to time, the Product Owner presents new or changed User Stories to the Team. The Team must estimate the Story Points of each story, and each Team Member has the right to change it. To do so:

1. Press [Product Backlog](#). (..and if requested, press [Backlog](#)).

Product Backlog

Name	Description	Team	Product Owner	Scrum Master	Current Sprint
Backlog1	The first Product Backlog	Team1	powner	smaster	

User Stories

☐ User Stories without Story Points only
 ☐ Completed User Stories too
 ☐ Closed User Stories too
 ☐ User Stories without Sprint only
 ☐ User Stories for current Project only
 ☐ Display Project / Target Version

Business Value	Story Points	ID	Category	Summary	Sprint
		2	General	Issue #2	
	21	3	General	Issue #3	
21					

2. In the list, click the **ID** of the story for editing
3. In the Story Points combobox set the points
4. Two rows below, press **Save Information**

4.4 Performing a Sprint

4.4.1 Sprint Planning

The Planning is moderated by the Scrum Master. He does the inputs of what developers have decided.

Please login as Scrum Master.

4.4.1.1 The Scrum Master creates the Sprint

1. Press **Product Backlog** → **Create a Sprint**
 - Type Name, Begin, End of the Sprint.
 - Type the multiline Sprint Goal
2. Press **Save**

Edit Sprint	
*Name	Sprint 1
Sprint Goal	Complete Version 1.1 Set up the multi user system
*Begin (DD.MM.YYYY)	05.03.2014
*End (DD.MM.YYYY)	01.04.2014
Status	open
*Team	Team1
Product Backlog	Backlog1
* required	
<input type="button" value="Save"/> <input type="button" value="Back"/>	

4.4.1.2 In the Planning, the Developers decide which User Stories to adopt to the Sprint

1. Press [Sprint Backlog](#) → **Adopt User Stories**. All User Stories not in a Sprint are listed:

Adopt User Stories					2 User Stories, 23 Story Points Chosen	
Business Value	Story Points	Version		ID		Summary
	2	Project1	<input checked="" type="checkbox"/>	2		Issue #2
	21	Project1	<input checked="" type="checkbox"/>	3		Issue #3
		23				
<input type="button" value="Adopt to Sprint"/> <input type="button" value="Back"/>						

2. Set the Checkboxes of stories to be adopted
3. Press **Adopt to Sprint**

4.4.1.3 In the Planning, the Developers add Tasks to the User Stories of the Sprint

If you are just coming from 4.4.1.2, directly go to step 3.
Else proceed with Step 1.

1. Press [Sprint Backlog](#) (.. and if necessary → **Choose a Sprint.**)

Sprint Backlog - Choose a Sprint						<input type="checkbox"/> Display closed Sprints too
Sprint	Begin	End	Remaining Time	Team	Product Backlog	Actions
test_Sprint	20.04.2014	19.05.2014	29 Days	Demo Team	Demo Product Backlog	<input type="button" value="Backlog"/>
Demo New Sprint	26.02.2014	12.03.2014	14 Days	Demo Team	Demo Product Backlog	<input type="button" value="Backlog"/>
Demo Sprint Running	11.02.2014	25.02.2014	5 Days	Demo Team	Demo Product Backlog	<input type="button" value="Backlog"/>

2. Press **Backlog** in the selected Sprint-line
The Sprint Backlog opens to show the associated User Stories

Sprint
Edit Sprint
Confirm Sprint
Close Sprint
Split Incomplete User Stories

Choose a Sprint

Sprint	Begin	End	Story Points	Remaining Time	Remaining Work (h)	Remaining Capacity (h)	Team	Product Backlog
Sprint 1	05.03.2014	01.04.2014	23	27 Days	0.00	0.00	Team1	Backlog1

Sprint Goal
Make product V1.1 running
Set up the multi user system

User Stories & Tasks
☐ Show Project And Target Version
☐ Show Only Open User Stories
☐ Show Only Own User Stories

ID	Summary	Developer	Planned (h)	Performed (h)	Enter performed work (h)	Rest (h)	Actions
#2	Issue #2						Add Task Remove Story
#3	Issue #3						Add Task Remove Story

3. In a selected User Story Press **Add Task**. The „Edit Tasks“ tab opens.
In the „**Add Task**“ subpane type **Name** and **Description**

Add Task

Name	Description	Developer	Planned Work	Actions
test_Task1	test_Task1	Please choose		Add Task

4. Press **Add Task**.
The pane now displays the Task as a single line and opens a new empty one for the next Task.
Add more Tasks by your choice.
5. Press **Back**. The „**Sprint Backlog**“ tab opens. The Taks are now listed under their User Stories.

User Stories & Tasks
☐ Show Project And Target Version
☐ Show Only Open User Stories
☐ Show Only Own User Stories

ID	Summary	Developer	Planned (h)	Performed (h)	Enter performed work (h)	Rest (h)	Actions
#2	Issue #2						Add Task Remove Story
#3	Issue #3						Add Task Remove Story
	Task1 of Issue 3	dev1	0.00	0.00	Enter	0.00	Edit Adopt Remove
	Task2 of Issue 3	dev3	0.00	0.00	Enter	0.00	Edit Adopt Remove

4.4.1.4 At the end of Planning, the Scrum Master Confirms the Sprint

In the Sprint Backlog press **Confirm Sprint**.

4.4.2 During the Sprint, the Developers maintain and finish their Tasks

Please login as Developer.

User Stories & Tasks							
<input type="checkbox"/> Show Project And Target Version <input type="checkbox"/> Show Only Open User Stories <input type="checkbox"/> Show Only Own User Stories							
ID	Summary	Developer	Planned (h)	Performed (h)	Enter performed work (h)	Rest (h)	Actions
#2	Issue #2						Add Task Split Story
#3	Issue #3						Add Task Split Story
	Task1 of Issue 3	dev1	0.00	0.00	<input type="text"/> Enter	0.00	Edit Adopt Resolve
	Task2 of Issue 3	dev3	0.00	0.00	<input type="text"/> Enter	0.00	Edit Adopt Resolve

1. During realization the Task's description may be refined. For this: Press **Edit**, do your inputs and press **Save**.
2. When the Task is completed, the Developer finishes it. For this: Press **Resolve** at right in the Task's row.

4.4.3 At end of Sprint, the Scrum Master closes the Sprint

Please login as Scrum Master.

Press [Sprint Backlog](#) → **Close Sprint**.

Ready! You have performed the first Sprint.
In order to start the next one, please go to 4.4.1.

5 Preview of planned Expert Components

The following presentation is just an enjoying preview. The described components are still under development. After completion they will be issued multi languaged and can be licensed from gadiv.

5.1 Expert Taskboard

The heart of daily work is the Sprint Backlog. It is the basis for coordination, cooperation, communication and success analysis during the permanent production.

At a single glance everything must be comprehensible, requestable and editable. It must operate just like a physical taskboard where paper cards are pinned at the wall in the columns "to be procecced", "in process", "done", but extended by all IT functionalities.

For professional work at high access rates we demand:

- perfect overview,
- fast access and editing on (cross-) information,
- ergonomic setting of status,
- immediate insight into all additional artefacts and documents

This is all implemented in our Expert Taskboard.

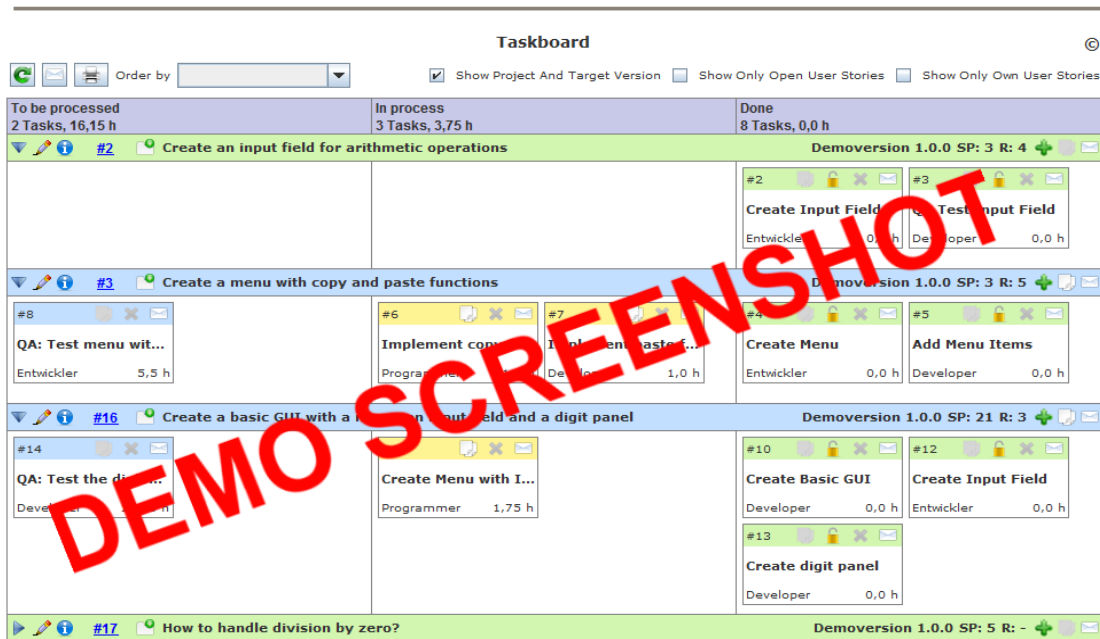

In the head section you find the functionality of sprint management: adapt stories, open/close sprint, manage team and team capacity etc. In the board below User Stories and their Tasks are shown. Create and edit Tasks, set status information etc. via clicks. In background activity, warnings for capacity running low etc. are displayed.

Next figure: Expert Taskboard head und board.

Edit Taskboard Manage Availability Manage Developer Capacities Adopt User Stories Sprint Backlog Statistics								
Sprint Edit Sprint Confirm Sprint Close Sprint Split Incomplete User Stories Choose a Sprint								
Sprint	Begin	End	Story Points	Remaining Time	Remaining Work (h)	Remaining Capacity	Team	Product Backlog
Demo Sprint	12.02.2014	14.02.2014	32	2 days	0.00	0.00	Demo Team	Demo Product Backlog
Sprint Goal								
- Finish project development - Publish project on SourceForge or Github								

One special mode of the Expert Taskboard is the "Daily-Scrum-Board".

Here all Tasks are highlighted which have been processed since the previous Daily Scrum. This automatically creates a guideline for the daily report and makes sure that nothing will be missed out.

5.2 Expert Statistics

Without velocity and burndown, Story Points are useless.

Our Expert Statistics offer a considerable variety of information and comparisons between previous-, running- and future Sprints. In background, these statistics do the monitoring jobs for capacity warnings, predictive informations and so on. In the foreground they appear as graphical plots.

The following figure is just an illustration.

A detailed documentation is in preparation.
